Preliminary draft:
Master list of ICT/education policy documents (version 0.2)

23 April 2011

The World Bank's ICT/education team often gets asked by countries for examples of 'ICT and education policies' to help inform their own planning processes in this area. We get this request so often that we have decided to (more) systematically document and catalog these sorts of policy documents in the coming months, with the assistance of some of our partner organizations, and make them widely available as part of a global ICT/education policy database.

As part of a process of making the information we collect publicly available as early as possible, and to be more transparent about how we go about our work, we thought we would share version 0.2 of our master list of policy documents related to ICT/education from around the world. This activity is one part of a larger World Bank initiative, System Assessment and Benchmarking for Education Results: The Use of ICT (SABER-ICT).

For more background on the types of documents we are collecting, and how we are doing so, please see the related post on the World Bank EduTech blog, How to identify and locate national ICT and education policies [http://blogs.worldbank.org/edutech/finding-policies].

Please note: This list is far from complete. Some of the items listed here may not be labeled correctly. Some of the translations of document titles into English may not be exact.

Please feel free to tell us what we're missing, and/or what we've got wrong, by making a comment on the related page on the World Bank EduTech blog, How to identify and locate national ICT and education policies [http://blogs.worldbank.org/edutech/finding-policies], via our online contact form [http://blogs.worldbank.org/edutech/contact] or on Twitter (please reference @WBedutech).

We hope to post an updated draft list in June 2011.

Thanks!
- the ICT/education team in the World Bank Education Sector Anchor Unit (HDNED)

Note: A number of online resources have been invaluable in helping to put together this list. Especially notable in this regard are the online resources from GeSCI, UNESCO-Bangkok, the European Schoolnet, Comminit, Eldis and Zunia. In addition, we note the tremendous value of a print publication: the revised second edition of Cross-National Information and Communication Technology Policies and Practices in Education (Plomp, Anderson, Law, eds.). This document is available through the SABER-ICT page on the World Bank education web site, http://go.worldbank.org/BKW0E2VTX0.
