

Malaria in Burkina Faso:

Responding to increased chloroquine resistance, the Government has changed its treatment regime to artemisinin-based combination therapies, financing this switch remains a serious problem.

The Booster Response:

A US\$12 million Booster has been added to Health Sector Support and Multisectoral HIV/AIDS as a contribution to the pooled health fund to:

- 1) Support community and district-level malaria prevention and treatment activities to be integrated into district and community action plans and financed through pooled funds at district-level and
- 2) Finance key commodities for malaria control, focusing on children under five and pregnant women
