Acknowledgments

The Little Data Book on Gender in Africa 2011 is a product of the Africa Region of the World Bank.

Rose Mungai was the director of this book and its companions—*Africa Development Indicators 2011*, *ADI Online*, *Africa Development Indicators 2011 CD-ROM*, and *The Little Data Book on Africa*; led the work on data management, consistency checks, and compilation; and provided overall data quality assurance. Jane Njuguna coordinated all stages of production. The core team included Françoise Genouille and Jane Njuguna. The overall work was carried out under the guidance of Shantayanan Devarajan, Chief Economist of the Africa Region.

Communications Development Incorporated provided design and layout.

Introduction

The Little Data Book on Gender in Africa 2011 is a pocket edition of *Africa Development Indicators 2011*. It contains some 60 key indicators on economics, human development, and empowerment and is intended as a quick reference for users of the *Africa Development Indicators 2011* book and *ADI Online*. The country tables present the latest available data for World Bank member countries in Africa.

Users guide

Aggregates

Aggregate data are based on the World Bank's regional classification for Sub-Saharan Africa and North Africa, which may differ from common geographic usage. Former Spanish Sahara is not included in any aggregates.

Statistics

Country data are for 1990, 2000, and the most recent year available, usually 2009, as economies were constituted in 2009. Regional data are for the most recent year available, usually 2009. Data in italics are for 2004–08. Consistent time-series data for 1961–2009 are available on *ADI Online*.

Symbols

.. means that data are not available or that aggregates cannot be calculated because of missing data in the years shown.

< is less than.

— is not applicable.

\$ means current U.S. dollars, unless otherwise noted.

0 or 0.0 means zero or small enough that the number would round to zero at the displayed number of decimal places.

Data presentation conventions

A billion is 1,000 million.

Growth rates are in real terms, unless otherwise specified.

Data consistency, reliability, and comparability

Considerable effort has been made to harmonize the data, but full comparability cannot be assured, and care must be taken in interpreting indicators. Many factors affect data availability, reliability, and comparability. Data coverage may be incomplete because of circumstances affecting the collection and reporting of data, such as conflicts. Although drawn from sources thought to be the most authoritative, data should be construed as indicating trends and characterizing differences across economies. Readers are advised not to compare data series between editions or across World Bank publications.

The cutoff date for data is May 2011.

Users guide

Classification of economies

For operational and analytical purposes the World Bank's main criterion for classifying economies is gross national income (GNI) per capita. Every economy in *The Little Data Book on Gender in Africa* is classified as low income, middle income, or high income. Low- and middle-income economies are sometimes referred to as developing economies. The use of the term is convenient; it is not intended to imply that all economies in the group are experiencing similar development or that other economies have reached a preferred or final stage of development. Classification by income does not necessarily reflect development status.

Low-income economies are those with a GNI per capita of \$995 or less in 2009.

Middle-income economies are those with a GNI per capita of more than \$995 but less than \$12,196. Lower middle-income and upper middle-income economies are separated at a GNI per capita of \$3,945.

High-income economies are those with a GNI per capita of \$12,196 or more.

Glossary

Adult literacy rate is the percentage of people ages 15 and older who can, with understanding, both read and write a short, simple statement about their everyday life. (United Nations Educational, Scientific, and Cultural Organization Institute for Statistics)

Age dependency ratio is the ratio of dependents—people younger than age 15 or older than age 64—to the working-age population—people ages 15–64. (World Bank staff estimates from various sources including census reports, the United Nations Population Division's *World Population Prospects*, national statistical offices, and household surveys conducted by national agencies and Macro International)

Age dependency ratio, old, is the ratio of older dependents—people older than 64—to the working-age population—those ages 15–64. Data are shown as the proportion of dependents per 100 working-age population. (World Bank staff estimates from various sources including census reports, the United Nations Population Division's *World Population Prospects*, national statistical offices, household surveys conducted by national agencies, and Macro International.)

Age dependency ratio, young, is the ratio of younger dependents—people younger than 15—to the working-age population—those ages 15–64. Data are shown as the proportion of dependents per 100 working-age population. (World Bank staff estimates from various sources including census reports, the United Nations Population Division's *World Population Prospects*, national statistical offices, household surveys conducted by national agencies, and Macro International.)

Antenatal care coverage (at least one visit) is the percentage of women aged 15–49 with a live birth in a given time period that received antenatal care provided by skilled health personnel (doctors, nurses, or midwives) at least once during pregnancy, as a percentage of women age 15–49 years with a live birth in a given time period. A skilled health worker/attendant is an accredited health professional—such as a midwife, doctor or nurse—who has been educated and trained to proficiency in the skills needed to manage normal (uncomplicated) pregnancies, childbirth and the immediate postnatal period, and in the identification, management and referral of complications in women and newborns. Both trained and untrained traditional birth attendants (TBA) are excluded. (http://www.who.int/reproductive-health/global_monitoring/index.html)

Antenatal care coverage (at least four visits) is the percentage of women aged 15–49 with a live birth in a given time period that received antenatal care four or more times with ANY provider (whether skilled or unskilled), as a percentage of women age 15–49 years with a live birth in a given time period. (http://www.who.int/reproductive-health/global_monitoring/index.html)

Glossary

Births attended by skilled health staff are the percentage of deliveries attended by personnel trained to give the necessary supervision, care, and advice to women during pregnancy, labor, and the postpartum period; to conduct deliveries on their own; and to care for newborns. (UNICEF, State of the World's Children, Childinfo, and Demographic and Health Surveys by Macro International.)

Contraceptive prevalence rate is the percentage of women who are practicing, or whose sexual partners are practicing, any form of contraception. It is usually measured for married women ages 15–49 only. (Household surveys, including Demographic and Health Surveys by Macro International and Multiple Indicator Cluster Surveys by UNICEF.)

Contraceptive prevalence, condom use is the percentage of women married or in-union aged 15 to 49, whose sexual partner is currently using a male condom for contraceptive purposes. (Household surveys, including Demographic and Health Surveys by Macro International and Multiple Indicator Cluster Surveys by UNICEF.)

Contraceptive prevalence, modern methods is the percentage of women married or in-union aged 15 to 49 who are currently using, or whose sexual partner is using, at least one modern method of contraception, regardless of the method used. Modern methods of contraception include female and male sterilization, oral hormonal pills, the intra-uterine device (IUD), the male condom, injectables, the implant (including Norplant), vaginal barrier methods, the female condom and emergency contraception. (Household surveys, including Demographic and Health Surveys by Macro International and Multiple Indicator Cluster Surveys by UNICEF.)

Economically active population in agriculture is that part of the economically active population engaged in or seeking work in agriculture, hunting, fishing or forestry. (Food and Agriculture Organization, Production Yearbook and data files.)

Female labor force as a percentage of the total show the extent to which women are active in the labor force. Labor force comprises people of the specified age group who meet the International Labour Organization's definition of the economically active population. (Source International Labour Organization, using World Bank population estimates.)

Female headed households shows the percentage of households with a female head. (Demographic and Health Surveys by Macro International.)

Firms with female participation in ownership are the percentage of firms with a woman among the principal owners. (World Bank, Enterprise Surveys (<http://www.enterprisesurveys.org/>.)

Glossary

Firms with female top manager is the percentage of firms with females as the top manager. (World Bank, Enterprise Surveys (<http://www.enterprisesurveys.org/>)).

Gross national income (GNI), World Bank Atlas method, is the sum of value added by all resident producers plus any product taxes (less subsidies) not included in the valuation of output plus net receipts of primary income (compensation of employees and property income) from abroad. Data are calculated in national currency and usually converted to U.S. dollars at official exchange rates for comparisons across economies, although an alternative rate is used when the official exchange rate is judged to diverge by an exceptionally large margin from the rate actually applied in international transactions. To smooth fluctuations in prices and exchange rates, a special *World Bank Atlas* method of conversion is used: it applies a conversion factor that averages the exchange rate for a given year and the two preceding years, adjusted for the difference between the rate of inflation in the country and that in France, Germany, Japan, the United Kingdom, and the United States (through 2000) or the Euro Zone, Japan, the United Kingdom, and the United States (since 2001). (World Bank and Organisation for Economic Co-operation and Development national accounts data files)

Gross domestic product (GDP) is the sum of gross value added by all resident producers in the economy plus any product taxes and minus any subsidies not included in the value of the products. It is calculated without making deductions for depreciation of fabricated assets or for depletion and degradation of natural resources. GDP data are shown at market prices (also known as purchaser values) and converted from domestic currencies using single year official exchange rates. For a few countries where the official exchange rate does not reflect the rate effectively applied to actual foreign exchange transactions, an alternative conversion factor is used. The sum of the components of GDP by industrial origin (presented here as value added) will not normally equal total GDP for several reasons. First, components of GDP by expenditure are individually rescaled and summed to provide a partially rebased series for total GDP. Second, total GDP is shown at purchaser value, while value added components are conventionally reported at producer prices. As explained above, purchaser values exclude net indirect taxes, while producer prices include indirect taxes. Third, certain items, such as imputed bank charges, are added in total GDP. (World Bank and Organisation for Economic Co-operation and Development national accounts data files)

Gross domestic product (GDP) growth is the average annual growth rate calculated from GDP at constant 2000 prices. (World Bank and Organisation for Economic Co-operation and Development national accounts data files)

Gross domestic product (GDP) per capita is calculated by dividing real GDP by the corresponding midyear population. (World Bank and Organisation for Economic Co-operation and Development national accounts data files)

Glossary

Gross domestic product (GDP) per capita growth is the average annual growth rate of real GDP per capita, calculated using the least squares method with 2000 exchange rates. (World Bank and Organisation for Economic Co-operation and Development national accounts data files)

Gross primary school enrollment is the ratio of total enrollment, regardless of age, to the population of the age group that officially corresponds to the primary level of education. Primary education provides children with basic reading, writing, and mathematics skills along with an elementary understanding of such subjects as history, geography, natural science, social science, art, and music. (United Nations Educational, Scientific, and Cultural Organization Institute for Statistics)

Gross secondary school enrollment is the ratio of total enrollment, regardless of age, to the population of the age group that officially corresponds to the secondary level of education. Secondary education completes the provision of basic education that began at the primary level and aims at laying the foundations for lifelong learning and human development by offering more subject or skill-oriented instruction using more specialized teachers. (United Nations Educational, Scientific, and Cultural Organization Institute for Statistics)

Gross tertiary school enrollment is the ratio of total enrollment, regardless of age, to the population of the age group that officially corresponds to the tertiary level of education. Tertiary education, whether or not to an advanced research qualification, normally requires, as a minimum condition of admission, the successful completion of education at the secondary level. (United Nations Educational, Scientific, and Cultural Organization Institute for Statistics)

Infant mortality rate is the number of infants dying before reaching one year of age, per 1,000 live births. (Inter-Agency Group for Child Mortality Estimation's *Levels and Trends in Child Mortality: Report 2010*)

Labor force participation rate is the percentage of the population of the specified age group that is economically active—that is, all people who supply labor for the production of goods and services during a specified period. (International Labour Organization's Key Indicators of the Labour Market database)

Life expectancy at birth is the number of years a newborn infant would live if prevailing patterns of mortality at the time of its birth were to remain the same throughout its life. (Based on data on male and female life expectancy at birth from United Nations Population Division's *World Population Prospects*, census reports and other statistical publications from national statistical offices, Eurostat's *Demographic Statistics*, Secretariat of the Pacific Community's Statistics and Demography Programme, and U.S. Census Bureau's International Database)

Glossary

Maternal mortality ratio, modeled estimate is the number of women who die during pregnancy and childbirth, per 100,000 live births. The data are estimated with a regression model using information on fertility, birth attendants, and HIV prevalence. (Trends in Maternal Mortality: 1990–2008. Estimates developed by WHO, UNICEF, UNFPA and the World Bank.)

Percentage of HIV-infected pregnant women who received antiretrovirals to reduce the risk of mother-to-child transmission. Numerator: Number of HIV-infected pregnant women who received antiretrovirals during the last 12 months to reduce mother-to-child transmission. Denominator: Estimated number of HIV-infected pregnant women in the last 12 months. The purpose of this indicator is to assess progress in preventing vertical transmission of HIV. All data reflect values representing 12 month period ending December 2007 which have been reconciled between reporting country and UNAIDS/WHO/UNICEF, unless otherwise noted. All analysis of this indicator, including quoted country figures, reflect numerators which have gone through a tri agency reconciliation (UNAIDS/WHO/UNICEF) process and denominators which have been estimated directly from the UNAIDS/WHO Reference group on Estimates, Modelling and Projections methodology (Spectrum). The reconciliation process ensured all agencies reported the same country endorsed figure which was the most recent and met the definition of HIV-infected women receiving antiretroviral drugs over the last 12 months, and thus reflect a full year. Every effort was made in cases of discrepancy across the three agencies to obtain approval from the country on a final indicator value. (<http://data.unaids.org/pub/GlobalReport/2008/>)

Population is total population based on the de facto definition of population, which counts all residents regardless of legal status or citizenship, except for refugees not permanently settled in the country of asylum, who are generally considered part of the population of their country of origin. The values shown are midyear estimates. (United Nations Population Division's *World Population Prospects*, census reports and other statistical publications from national statistical offices, Eurostat's *Demographic Statistics*, Secretariat of the Pacific Community's Statistics and Demography Programme, U.S. Census Bureau's International Database, and World Bank estimates based on data from these sources as well as household surveys conducted by national agencies, Macro International, the U.S. Centers for Disease Control and Prevention, and refugees statistics from the United Nations High Commissioner for Refugees)

Population growth is the exponential rate of growth of midyear population from year $t-1$ to year t . (Based on data on population from United Nations Population Division's *World Population Prospects*, census reports and other statistical publications from national statistical offices, Eurostat's *Demographic Statistics*, Secretariat of the Pacific Community's Statistics and Demography Programme, U.S. Census Bureau's International Database, and World Bank estimates based on data from these sources as well as

Glossary

household surveys conducted by national agencies, Macro International, the U.S. Centers for Disease Control and Prevention, and refugees statistics from the United Nations High Commissioner for Refugees)

Primary school completion rate is the percentage of students completing the last year of primary school. It is calculated as the total number of students in the last grade of primary school minus the number of repeaters in that grade, divided by the total number of children of official graduation age. (United Nations Educational, Scientific, and Cultural Organization Institute for Statistics)

Population ages 15–64, female (% of total) is the number of females who could potentially be economically active. Population is based on the de facto definition of population. (World Bank staff estimates from various sources including census reports, the United Nations Population Division's World Population Prospects, national statistical offices, household surveys conducted by national agencies, and Macro International.)

Population ages 15–64, male (% of total) is the number of males who could potentially be economically active. Population is based on the de facto definition of population. (World Bank staff estimates from various sources including census reports, the United Nations Population Division's World Population Prospects, national statistical offices, household surveys conducted by national agencies, and Macro International.)

Ratio of girls to boys in primary and secondary school is the ratio of the female gross enrollment rate to the to male gross enrollment rate in primary and secondary school. (United Nations Educational, Scientific, and Cultural Organization Institute for Statistics)

Total fertility rate represents the number of children that would be born to a woman if she were to live to the end of her childbearing years and bear children in accordance with current age-specific fertility rates. [(1) United Nations Population Division. 2009. World Population Prospects: The 2008 Revision. New York, United Nations, Department of Economic and Social Affairs (advanced Excel tables). Available at <http://esa.un.org/unpd/wpp2008/index.htm>. (2) Census reports and other statistical publications from national statistical offices, (3) Eurostat: Demographic Statistics, (4) Secretariat of the Pacific Community: Statistics and Demography Programme, (5) U.S. Census Bureau: International Database, and (6) household surveys conducted by national agencies, Macro International, and the U.S. Centers for Disease Control and Prevention.]

Total labor force comprises people the specified age group who meet the International Labour Organization definition of the economically active population: all people who supply labor for the production of goods and services during a specified period. It includes both the employed and the unemployed. While national practices vary in the treatment of such groups

Glossary

as the armed forces and seasonal or part-time workers, in general the labor force includes the armed forces, the unemployed, and first-time job-seekers, but excludes homemakers and other unpaid caregivers and workers in the informal sector. (Source International Labour Organization, using World Bank population estimates.)

Under-five mortality rate is the probability that a newborn baby will die before reaching age 5, if subject to current age-specific mortality rates, expressed as a rate per 1,000. (Inter-Agency Group for Child Mortality Estimation's *Levels and Trends in Child Mortality: Report 2010*)

Unmet need for contraception is the percentage of fertile, married women of reproductive age who do not want to become pregnant and are not using contraception. (Household surveys, including Demographic and Health Surveys by Macro International and Multiple Indicator Cluster Surveys by UNICEF.)

Unemployment refers to the share of the labor force that is without work but available for and seeking employment. Definitions of labor force and unemployment differ by country. (Source International Labour Organization, Key Indicators of the Labour Market database.)

Women in national parliaments are the percentage of parliamentary seats in a single or lower chamber held by women. (United Nations, Women's Indicators and Statistics database (www.ipu.org).)

Youth unemployment refers to the share of the labor force ages 15–24 without work but available for and seeking employment. Definitions of labor force and unemployment differ by country. (International Labour Organization, Key Indicators of the Labour Market database.)

Youth literacy rate is the percentage of people ages 15–24 who can, with understanding, both read and write a short, simple statement about their everyday life. (United Nations Educational, Scientific, and Cultural Organization Institute for Statistics)
