- ❑ The CDM gas flaring reduction projects demonstrate having a positive impact to the sustainable development
- ❑ However, this impact is so far limited due to the low number of projects

## **Necessary steps forward to harness this impact?**

- ❑ Need to enlarge the scope of eligible activities
  - ❑ Need to have an more open exchange with the methodology decision-makers
  - ❑ Need to have stronger engagement of the host countries and national oil companies to maximize the impact the leverage for the sustainable development
  - ❑ Overcoming current limitations will allow to increase the interest of the main actors and enlarge the scope of projects
  - ❑ Programs including policy components could further target the use of carbon finance for achieving sustainable development goals
