*These notes summarize recent issues in Indonesian foreign trade. These reflect the author's views and not necessarily those of the World Bank

Summary Findings in January–December 2006

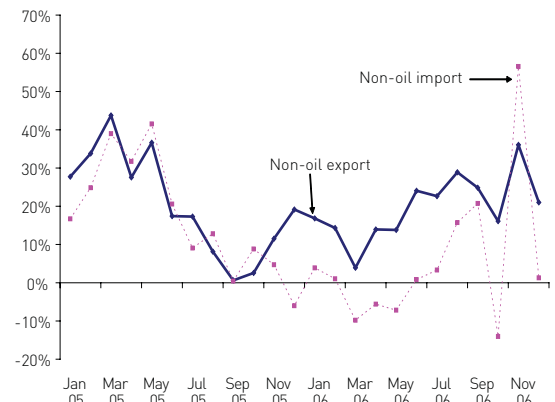

- Total exports in 2006 reached a record of \$100.7 billion and grew by 17.6 percent, slightly lower than growth in 2005 of 19.7 percent. Non-oil and gas exports increased by 19.7 percent and reached \$79 billion. Meanwhile oil and gas exports grew by 10.2 percent.
- Monthly exports grew by 6.3 percent in December 2006. During this month, exports of oil and gas grew by 7.1 percent while non-oil and gas exports grew by 6.3 percent.
- In 2006, total imports grew by 5.9 percent much lower compare to 2005 imports of 24 percent. Oil and gas imports increased by 8.7 percent and non-oil/gas imports grew by 4.6 percent.
- Detailed data until October 2006 show that mining and mineral, and agriculture were the main drivers of exports. Mining and minerals exports grew by 41.5 percent while agricultural exports grew by 27.4 percent. During the same period volume of non-oil exports based on constant price 2005 grew by 10.5 percent.
- In January to October 2006, total import went up by 3.2 percent. Oil and gas imports grew by 9.1 percent, higher than the non-oil/gas growth at 0.6 percent. Imports of fuels and lubricants accounted for 82.9 percent of total imports growth, which was driven by importing of processed lubricating oil growth (76 percent).

Non-Oil and Gas Trade by Major Trading Partners²

- In period 2006 Japan was the largest exports destination for Indonesia with 15.4 percent share of total non-oil/gas exports and exports to Japan grew rapidly by 27.6 percent. Exports to the US grew by 12.1 percent and accounted for 13.4 percent of total non-oil gas exports.

- The export growth to China, the fourth largest non-oil/gas exports destination, decelerated to 10.4 percent. Non-oil/gas imports from China grew by 20.9 percent, while imports from Japan continued to fall by 20.6 percent. This development made China together with Japan to have equal share of 13 percent in Indonesia's imports of non-oil and gas.
- Primary and natural resource base exports³ continued to contribute to growth in non-oil /gas sector of 51.3 percent, which mainly contributed by rubber, vegetable oil (mostly palm oil), copper, coal, and gold. Significant growth was also experienced by manufactured products such as textile and footwear, chemical materials, machinery, iron and steel, and transports equipment; while exports of electronics and computers continued to drop.
- Consumer goods and capital goods were commodity groups that contributed positively to non-oil/gas import growth, while intermediate and transport and parts registered negative growth.
- In October 2006 both non-oil export and import experienced a slower growth (a decline of 14 percent) due to the timing of the fasting month and Idul Fitri 24-25 October (chart 1).

Chart 1. Non-oil exports and imports growth 2005-2006

Note: * Preliminary Figures, BPS Export-Import Statistics

EXPORTS JANUARY - OCTOBER 2006

Overall: Total exports increased by 16.4 percent with oil/gas exports rose by 11.2 percent and non-oil/gas exports by 18.0 percent.

Agricultural products: Agricultural exports increased by 27.4 percent and accounted for 24.0 percent of total export growth. Robust export value of rubber (79.7 percent), palm oil (23.4 percent) and cocoa (22.7 percent) were parallel with strong growth in volumes; rubber (17 percent), palm oil (15.2 percent), and cocoa (29.1 percent).

Mining and mineral commodities: Mining and mineral accounted for 33.3 percent of total exports growth, and grew by 41.5 percent. Higher world commodity prices of mining contribute to the rapid growth especially copper

(90 percent), aluminum (33 percent), and coal (5 percent). Meanwhile, although copper volume decreased 9 percent, strong copper world price resulted of export value increased by 44.7 percent. A strong growth of coal exports also increased its growth value to 43 percent.

Forestry: Exports of forestry products grew by 13.3 percent (yoy), it was much higher than last year growth at 3 percent. Paper and paper products grew stronger by 22.2 percent and pulp and was paper grew by 26 percent. Plywood increased by 6.9 percent in 2006, much higher than the negative growth rates 8.6 in 2005. Sawn wood export grew by 16.9 percent, significant turnaround from -11.7 percent in 2005.

Manufacturing: Manufacturing exports increased by 8.3 percent and accounted for 21.4 percent of total export growth.

Textile fiber and tread, and footwear exports grew steadily by 9.5 percent and 12.2 percent, while textile fabric declined by 1.8 percent. Compared to the 2005 growth rates at 10.5 percent, textile fabric experience significant declining. Electronics and computers exports continued to decline by 6.7 percent. Computer parts and video/audio recorder export declined significantly by 32.1 percent and 24 percent. Strong growth was demonstrated by most commodities in other manufactured products (shared 20 percent of total exports) such as iron and steel (63 percent), transportation equipment (40 percent), and tires and rubber products (21 percent), construction material (24 percent), and machinery (18 percent). However, fertilizer exports fell by 90 percent from 146 percent increased in 2005.

IMPORTS JANUARY - OCTOBER 2006

Overall: Total imports growth rates were 3.2 percent, with oil and gas imports increased by 9.1 percent and non-oil/gas imports slightly increased by 0.6 percent.

Consumer goods: Food and beverages imports (up 19.4 percent) were the main factor driving strong growth of consumer goods (up 16.2 percent). The value of rice imports continued to grow by 115.8 percent and fresh fruits increased by 61 percent. Television parts which has

strong growth last year, declined by 43 percent this year. In addition, non-durable imports, especially imports of medicines increased quite strongly by 29 percent.

Fuel and lubricants: The imports grew by 8.7 percent (yoy), which was primarily due to the growth in processed lubricating oil (76 percent) and Primary forms of fuels and lubricants (10.3 percent).

Capital goods: Capital goods imports grew by 2.4 percent. This positive growth was mainly driven by heavy

transport equipment (84.4 percent).

Transport, parts and accessories: The growth rate turned to negative at 17.8 percent. Passenger cars dropped by 23.9 percent and parts and accessories fell by 18.3 percent.

Intermediate goods: Imports of intermediate goods slightly improved by 1.3 percent. Among major items, manufactured fertilizer, and dairy product import increased by 12 percent and 10 percent while iron and steel imports experienced strong decline at 17.3 percent.

Table 3: **Exports in January – October 2006**(USD million)

Note: * Starting with this edition, World Bank classification of capital goods includes heavy transport equipment (e.g. train and ships) making it the same as BPS on this issue. However, other elements of the World Bank classification of capital goods are not exactly the same as BPS.

IMPROVING THE COMPETITIVENESS OF INDONESIAN SHRIMP EXPORTS

By Manuel Albaladejo

Significance: The Indonesian shrimp industry is facing strong competitive pressures while suffering from domestic constraints, mainly lack of quality standards and low productivity. The revitalization of the sector is however crucial for export growth and

poverty reduction purposes – shrimp exports account for around 1.8% of the country's non-oil exports and the number of farmers involved in the sector is estimated to be 1.7 million. Diversification towards higher value-added processed shrimp products can bring significant trade gains and externalities to the sector.

Analysis: The shrimp sector has been an important pillar to the Indonesian

economy through export revenues, income generation and employment. But its potential is far from being fulfilled as it is estimated that 75% of the total farm area (around 240,000 ha) uses traditional low-productivity aquaculture methods.

Strong demand at affordable prices. Despite the stringent trade measures under WTO rules (including antibiotic checks, certification and traceability),

the sector is expanding globally as prices have fallen and demand has increased:

- World demand for shrimp products grew at 5.6% per annum between 2000 and 2005;
- Prices have gone down by 5% in the last five years. Intensive farming and the use of technology have increased shrimp productivity worldwide, making prices more affordable to consumers.

Increased competition. Good global prospects have led to international competition worldwide. Indonesia's shrimp sector faces strong competitive pressures from various fronts:

- In the eastern hemisphere, China, Thailand, Vietnam, Malaysia and India have big export-oriented industries. The Philippines also hopes to reinvigorate its industry with the culture of the western white shrimp;
- In the western hemisphere, Ecuador, Peru and Panama have recovered from the whitespot epidemic of the 1990s, and will probably regain world market share, particularly in the US.

Processing adds value to shrimp exports. In a sector with falling prices and mounting competition, adding value through improved quality and processing becomes crucial to sustaining competitiveness. For instance, processing of shrimps brings greater benefits to exporters (US\$6.3 per Kg compared to US\$5.6 per Kg for frozen shrimp) and generates externalities to the sector as a whole (figure 1):

- Less exposure to international price fluctuations and bans from importers;
- Greater use of technological advances and skilled human resources;
- Push-effect on intensive farming aquaculture for processing purposes, and related industrial subsectors (e.g. canning and preserving).

World demand for processed shrimp products has boomed in the last five years (10.2% import growth between 2000 and 2005), fuelled by increased consumption in Europe and the US. Prepared and preserved shrimp products account for 21.5% of total shrimp trade worldwide, up from 17.3% in 2000.

Export performance. Indonesia's shrimp exports reached US\$920 million in 2005 – a 3.1% increase per annum of 2002 export levels, but still US\$29 million below the export value of 2000 (figure 2). Indonesian processed shrimp exports increased dramatically from US\$1.3 million in 2000 to US\$112.6 million in 2005, accounting for much of the sector's recovery. This is indeed a promising sign of diversification into higher value-added shrimp products, though export values are still low relative to the country's real potential.

Given the harsh international pressures, Indonesia's export performance needs to be assessed in a comparative perspective:

- Indonesia's world market share for shrimp declined from 7.9% in 2000 to 5.8% in 2005. This is mainly due

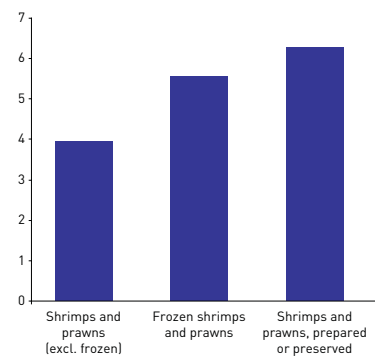

to the comeback of the big Latin American shrimp exporters like Ecuador; the enhanced productivity and cost-efficiency of East Asian competitors like Thailand; and the emergence of newcomers in the region, China (see figure 3);

- Indonesia is reducing its export dependency on shrimp, while moving up the value chain towards high value-added processed shrimp exports (figure 4). However it still is far from best practice in the region (see Thailand and China);
- Indonesia and India share a similar trade path in export capacity (as depicted by the bubble size) and processing levels in shrimp. Indian processed shrimp exports grew by US\$120 million between 2000 and 2005.

Structural constraints. According to the FIAS-World Bank report (2006), Indonesia faces severe obstacles for enhanced export competitiveness, including:

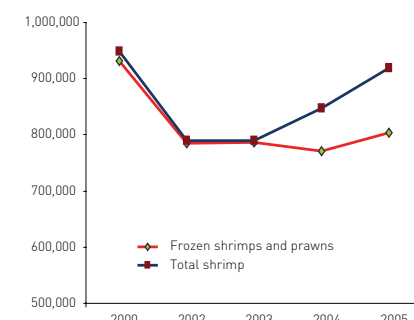

- Weak enforcement of existing aquaculture product and process standards. Indonesian shrimp farms often fail to comply with health conditions, which could lead to an import ban;
- Poor quality of the brood stock used by domestic hatcheries to produce fry. This significantly undermines survival rates, productivity and quality of the output;
- High cost of shrimp feed. The cost in Indonesia is between 15% and 40% more than in Thailand and China, respectively, mainly due to the

Figure 1. Unit value of world trade for shrimp (US\$/kg), 2005

Figure 4. Competitiveness and upgrading in the shrimp value chain for Indonesia and comparators, 2000-2005

Source: UN Comtrade

higher import content of Indonesian shrimp feed;

- Poor management practices. Poor feeding practices and indiscriminate use of antibiotics are good examples of how poor farm management practices impact the sector's competitiveness;

- 'Bad image' of Indonesian shrimp. The main reason of this perception from global buyers is the industry's inability to achieve consistent product quality.

The road ahead. There are several areas that call for urgent action if Indonesia is to improve the competitiveness of the shrimp sector:

- Improving enforcement of quality standards. This is a long-gestating process that requires the prior construction of 'shrimp clinics' in key hatchery production areas to test for disease before stocking and production;
- Improving productivity. Setting up 'one-stop-aqua-shops' has proved to be a successful mechanism to boost productivity in competing countries. These are mobile shop/service providers selling products and providing services and up to date information to farmers;
- Improving the image and branding in key markets. There is the need to develop a market information

tool as a 'one-stop shop' for shrimp exporters in Indonesia, including accurate industry data, data on international prices, market trends, legislation, and experiences of problems and successes.

Conclusion: Indonesia needs to revitalize its shrimp industry and make it more competitive. Failing to do this would negatively affect the lives of many. Indonesia has to reap the benefits of increased global demand through enhanced quality, productivity and diversification into high value-added processed shrimp products. The road ahead may be bumpy but the cost of inaction is surely greater.

Note:

- 1/ This item contains shrimps, prawns, lobsters, crabs, muscles, etc..
- 2/ Indonesian translation of palm oil is minyak kelapa sawit; within this item, we include crude form (CPO) and other form of palm oil.
- 3/ Indonesian translation of palm kernel oil is biji minyak kelapa sawit; within this item, we include crude form and other form.
- 4/ Copra oil is the oil made from dry coconut; within this item, we include crude form and other form.
- 5/ Wood furniture is not included in the forestry products.
- 6/ This item contains raw woods and other wood simple form products
- 7/ This item contains integrated circuits, relays, switches, and transformers.
- 8/ This item contains automobile and parts, and other transports
- 9/ Contribution to growth; by total oil and gas export and total non-oil and gas export
- 10/ Contribution to growth (total export)

* The complete mapping on the items in this table to the HS 9 digits ver.1996 and the explanation is available in the EXP_CODE

Annex 2: INDONESIA IMPORTS, in Million USD
