

HEALTHY DEVELOPMENT

THE WORLD BANK STRATEGY FOR
**HEALTH, NUTRITION, &
POPULATION RESULTS**

THE WORLD BANK

Introduction

- Global Trends in Health, Nutrition and Population
- New Opportunities and Challenges for the Global Health Agenda
- The World Bank Strategy
- Next Steps for Implementation

Significant achievements have been made in extending life expectancies in the developing regions of the world...

...but progress has been slow, or even reversed, in some parts of the world, notably in Sub-Saharan Africa.

Global trends in underweight (Children 0-4 Years)

1980-2005

Malnutrition problem remains large and extensive

Inequities in health outcomes persist at the country level

Under-five mortality rate

Stunting prevalence (%)

...as well as inequities in the allocation of public financing for health

Share of public spending in health as % of total, by income quintiles

	Poorest Quintile	Richest Quintile
■ Sub-Saharan Africa	12	30
■ E. Europe & C. Asia	13	27
■ South Asia	19	21

Each year, 10.5 million children die before they reach the age of 5 from largely preventable diseases

And under-nutrition is the underlying cause of at least 3.5 million deaths among children under five years.

Over 20 % of the women who die in childbirth do so because of malnutrition...

Under-nutrition in the first 2 years of life leads to irreversible brain damage and losses in physical productivity...

Malnutrition and Ill-health affects economic growth...

- GDP losses $\geq 2-3\%$
- Leads to a $>10\%$ potential reduction in lifetime earnings for each malnourished individual
- Malnutrition (stunting) in early years linked to a
 - 4.6 cm loss of height in adolescence
 - 0.7 grades loss of schooling
 - 7 month delay in starting school

(Improved nutrition can be a driver of economic growth)

The Emerging Global Health Agenda

In response to overwhelming need - there has been a dramatic increase in Global Development Assistance for Health

**Development assistance for health, by source
2000 and 2005, US\$ billion**

But... aid effectiveness could be improved

- Better aligned with government priorities
- More predictable and less volatile
- Better harmonized to reduce administrative costs

**Extreme
volatility in
external
financing for
health**

Global Health Challenges

- Malnutrition, reproductive, maternal and child health goals (MDG 1, 4 & 5) are not on track in many countries
- Emerging risks of global pandemics
- Inadequate attention to measuring and monitoring **Results**
- Limited public policy actions and capacity in many developing countries

Global Health Opportunities

- Global attention to health policy has increased dramatically, with active engagement of private foundations and other new partners
- While single-intervention approaches remain a high priority, renewed attention to health systems is being embraced by global and country-level partners
- G8 and TICAD IV under Japanese leadership offer excellent opportunities for consolidating global commitments

The World Bank's Health, Nutrition and Population (HNP) Strategy

1. Improve Health, Nutrition and Population outcomes at country levels, with particular focus on the poor and vulnerable population
2. Prevent poverty due to illness by strengthening financial protection
3. Improve financial sustainability and its contributions to sound macroeconomic and fiscal policy
4. Improve governance, accountability, and transparency in health, nutrition and population

Improve the level and distribution of key HNP outcomes, particularly for the poor and vulnerable

Trends in infant mortality rate by World Bank region, 1980 – 2004

Use of Basic MCH Services by Lowest and Highest Economic Quintiles, 50+ Countries

Prevent poverty due to illness and injuries by strengthening financial protection

Percentage of people falling below the poverty line due to illness, in selected Latin American countries, 2004

Improving governance, accountability, and transparency in the health sector

Patients have to make informal “under-the-table” payments to access health care in many countries.

MDG 6: HIV/AIDS Programs

In Rwanda, the World Bank's life-saving AIDS medicines keep this mother and father alive to care for their young child...

Preventing Global Epidemic

The World Bank has helped Vietnam fight Avian Flu since 2003...

Vietnam veterinarian inspects live ducks.

Providing support to “Fragile States”

- The World Bank supports special programs to accelerate recovery after natural disasters and in post-conflict countries
- In addition to physical reconstruction, these programs include human security components, e.g.:
 - Earthquake recovery program in Turkey included mental health programs
 - Disability Project in post-conflict Bosnia-Herzegovina helped war-injured citizens with physiotherapy and prostheses

Improved Health Facilities in Tajikistan

BEFORE

AFTER

Primary Care Clinic, Gaza

Needle Disposal

Cold Storage

World Bank investments in Primary Health Care facilities in low income communities

Strengthening Health Systems

- Weak health systems remain a major roadblock to achieving *Millennium Development Goals 1, 4, 5 and 6*.
- A Health Systems approach should address the **supply** and **demand** constraints, including: limited human resources, weak supply chain and logistics, poor governance & regulation, and lack of accountability.

Next Steps – What can we do together?

- Re-focus attention and resources on the “neglected MDGs”: nutrition, reproductive health, maternal and child health.
- Create a common platform for Health System strengthening at the country level
- Mobilize resources for large-scale implementation (e.g., through IDA Credit)
- Develop robust data gathering and analytical capacity for evidence-based policy decisions

Next Steps – What can we do together?

- Promote collaborative division of labor and better accountability among global and local partners
- Strengthen partnership with private sector (e.g., in R&D) to promote innovations and investments in affordable solutions
- Ensure linkages with macroeconomic policies to promote growth and reduce poverty

In conclusion

- The road ahead will not be easy: it will require all of us working together to achieve our shared goals.
- We look to Japan's leadership and political commitment to help us sustain these efforts over the long term.
- We also look forward to building new partnerships with the private sector and civil society in finding innovative solutions to these challenging problems.

On behalf of women and children around the world, we thank you for your attention!
