## INTRODUCTION

### PREAMBLE

This *Archaeology Field Survey Database Report* has been prepared as an interim deliverable under the *Red Sea Dead Sea Water Conveyance Study Environmental and Social Assessment*. It presents the data and information collected during the archaeology field work and literature review carried out to date under the ESA, and will be followed by an *Archaeology Site Assessment Report* in September 2010 that will present an analysis of this information for the purposes of the impact assessment.

### CONTENTS OF THE DATABASE

The field survey database is structured in three parts, as follows (please click on the links to access the database):

- *Part 1* presents a series of tables summarising the information collected for archaeological sites within the different project alignments and locations of the Project<sup>(1)</sup>, as follows:
  - *Table 1A* summarises information collected for the pipeline route;
  - *Table 1B* summarises information collected at the locations of the canals, tunnels and adits;
  - *Table 1C* summarises information collected as the two potential desalination plant locations (C0 and C220), the hydraulic descent and the hdropower plant location;
  - *Table 1D* summarises information collected for the freshwater pipeline route within Jordan (alternative 3);
  - *Table 1E* summarises information collected for the freshwater pipeline route within the Palestinian Authority;
  - *Table 1F* summarises information collected for the freshwater pipeline route within Israel.

(1) Please refer to the *RSDSC Study Program Feasibility Study* for details of the proposed project alignments and sites.

- *Part 2* presents a series of maps showing the locations of the different sites<sup>(1)</sup>, as follows:
  - *Map Set 2A* show the site locations along the pipeline route;
  - *Map Set 2B* shows the site locations for the canals, tunnels and adits;
  - *Map Set 2C* shows the site locations for the desalination plant options, hydraulic descent and hydropower plant;
  - *Map Set 2D* shows the site locations along the freshwater pipeline route within Jordan (alternative 3);
  - *Map Set 2E* shows the site locations along the freshwater pipeline route within the Palestinian Authority and Israel.
- *Part 3* presents a series of site photographs taken during the present field survey campaign, including a photo index.

### *SOURCES OF INFORMATION*

The information and data presented in this report were collected from previously published (and in some cases unpublished) field surveys, supplemented and verified by a field survey undertaken in Jordan in December 2009 and February/March 2010.

Each of the beneficiaries involved has their own approach to the storage of archaeological information. Most of it is available in various databases, controlled and managed by the Departments of Antiquities and is accessible to the public for consultation.

The main databases obtained from these sources have been integrated into one. However, additional, more extensive information about individual sites and survey regions is provided for many sites by the original researchers, in published reports. Therefore, additional information about sites, and additional sites not in the databases provided, have been added to our master database and used as the basis of the present study.

Sources of information used for the study include the following:

**Jordan:** For Jordan the JADIS database contains basic information about most recorded archaeological sites in the country. Additional sources used are the published reports of relevant surveys:

Barker G.W., D. Mattingly and D. Gilberston (eds),

(1) The maps also present proposed mitigation levels for each site: these options will be discussed in the forthcoming *Archaeology Site Assessment Report*, and will not be discussed further in this report.

Additional information was obtained through personal communication with Z. Fiema (Tuwana survey), C. Tuttle (Qa es-Sa'idiyin), G. Clarke (Wadi Hasa North Bank Survey) and R. Adams (Wadi Finan)

**Palestinian Authority:** The main source of information for the presumed corridor of the desalinated water pipeline in the PA is *Israeli Archaeological Activity in the West Bank, 1967–2007: A Sourcebook*, by R. Greenberg and A. Keinan. For information before 1967 and after 2007 the Palestinian Department of Antiquities has been contacted and additional information is still pending.

**Israel:** The Israel Antiquities Authority (IAA) control the database of archaeological excavations and surveys in Israel and have made this available to the project.

### *GENERAL DESCRIPTION OF FIELD SURVEY*

Large areas of Jordan have been the subject of archaeological surveys in the past, but the coverage of these varies considerably. The aim of the present field survey was to inspect those areas that have not been previously surveyed, and to fill in some gaps in previously surveyed areas within the area impacted by the Project. To this end, a field survey was carried out to determine the presence of archaeological remains in most of the accessible project areas. By combining the results of this field survey with the study of previous and published fieldwork, a sufficiently clear picture emerges of what sites lay within the areas that might be affected by the currently proposed configurations of the various project components.

Survey methods for each affected area were adjusted according to terrain; the existence and findings of previous research; the likelihood of finding archaeological remains; and, the likely requirements of the Project in the vicinity (either a 100 m linear corridor, or a block of land).

#### *Nature of the terrain*

The project area is sparsely populated with very limited temporary Bedouin camp sites and, apart from the Bedouin village of Gweibah, (north of Finan), virtually no permanent dwellings visible in or around the sites at the time of the survey.

In the eastern side of the Wadi Araba/Arava (WAAV), the landscape consists of foothills and mountains (generally granitic rocks with some sandstone), dissected by many wadis, some very large, with correspondingly large alluvial fans spreading westwards. In this landscape, most sites (apart from cemeteries) tend to be near wadi mouths. This is also where the adits or portals are located for the tunnel options of the Project. The bottom of the WAAV, to the west, consists of flat desert, some of which is covered by large dune fields, the rest mostly by stony desert pavement. The seawater pipeline

route passes through this landscape. Any archaeological remains that are buried under the dunes and layers of wind-blown sand are, therefore, invisible. The only visible remains are those of relatively recent and/or large structures and sites in areas where the dunes do not cover the original ground surface. Systematic walkovers of targeted areas were undertaken to provide the best sample coverage of these areas.

In mountainous areas crossed by the proposed eastern freshwater pipeline route, the bedrock at the western, bottom end is sandstone, and becomes mostly limestone higher up to the east. In these areas, wadi terraces and gentle slopes are the most likely places to find occupation remains, and hilltops often have burials, hill forts or watch towers, while the hillsides are usually devoid of major remains. Targeted walking survey in these landscapes therefore focused mainly on wadi bottoms, gentle slopes and hilltops.

Some of these mountainous landscapes are defined by sheer cliffs and therefore are unlikely to have archaeological remains. They are also difficult and dangerous to access and therefore these areas have not been surveyed by previous surveys, nor by the present survey.

Other areas that were extremely difficult to access included deeply dissected hilly areas and those that take unreasonable amounts of time to reach (ie very far from the nearest point accessible by car). The few such locations within the project area were mostly associated with the eastern freshwater pipeline, within the westernmost 10–15 kilometres – the stretch beginning near the proposed site of the high level desalination plants (Wadi Telah) and rising eastwards, and the section where the pipeline crosses the Wadi Hasa. These areas have not been surveyed by the present study, even though they may have archaeological remains. It should be noted that some have been covered by previous surveys. These areas are particularly recommended for monitoring directly prior to and/or during construction.

## *SURVEY METHODOLOGY*

The techniques used in the field were:

- Systematic walkover survey
- Drive-over survey
- Targeted sample survey

The survey areas subject to systematic walkovers were the proposed component areas demarcated on the plans provided by the RSDSC Feasibility Study comprising:

- Long narrow right of way for the proposed 220 m canals and the seawater and freshwater pipelines;

eastern and western ends of the eastern freshwater pipeline, between Ghor Feifa and Hasa) these individual graves were not recorded.

All the data on archaeological sites collected from publications and from the archaeological field survey were tabulated into one master database, which is presented in the following sections of this report.
