Discussion Topic

Who should be responsible for “sustainability”

- Buyer
- GOL
- Developer
- Financier
- PPA (contracts)

Existing situation/Trends

- Mainly rely on the standard/guideline introduced by Worldbank/ADB for a large scale project
- Rely on Equator Principles for the projects involving international banks
- Less international/supra-national involved in the future projects as their stringent requirement costs time/money
- Developers prefer participation from Thai commercial banks

Conclusion

It should be GOL

- To set up the guideline/standard
- Must be a practical one
- Gradually increased
- Help stakeholders to understand the costs/tasks involved from the initial stage
- Maintain and further refine guideline/standard as it is for the benefits of Lao PDR
- International certification can help increasing transparency
