

Paying taxes

Tax payable and compliance

Taxes are essential. Without them there would be no money to fund schools, hospitals, courts, roads, water, waste collection and other public services that help businesses to be more productive. Still, there are good ways and bad ways to collect taxes.

The *Doing Business* tax survey records the effective tax that a company must pay and the administrative costs of doing so. Imagine a medium-size business, TaxpayerCo, that started operations last year. *Doing Business* asked accountants in 178 economies to review TaxpayerCo's financial statements and a standard list of transactions the company completed during the year. Respondents were asked how much tax the business must pay and what the process is for doing so.

The business starts from the same financial position in each country. All the taxes and contributions paid during the second year of operation are recorded. Taxes and contributions are measured at all levels of government and include corporate income tax, turnover tax, all labor contributions paid by the company (including mandatory contributions paid to private pension or insurance funds), property tax, property transfer tax, dividend tax, capital gains tax, financial transactions tax, vehicle tax and other small taxes (such as fuel tax, stamp duty and local taxes). A range of standard deductions and exemptions are also recorded.

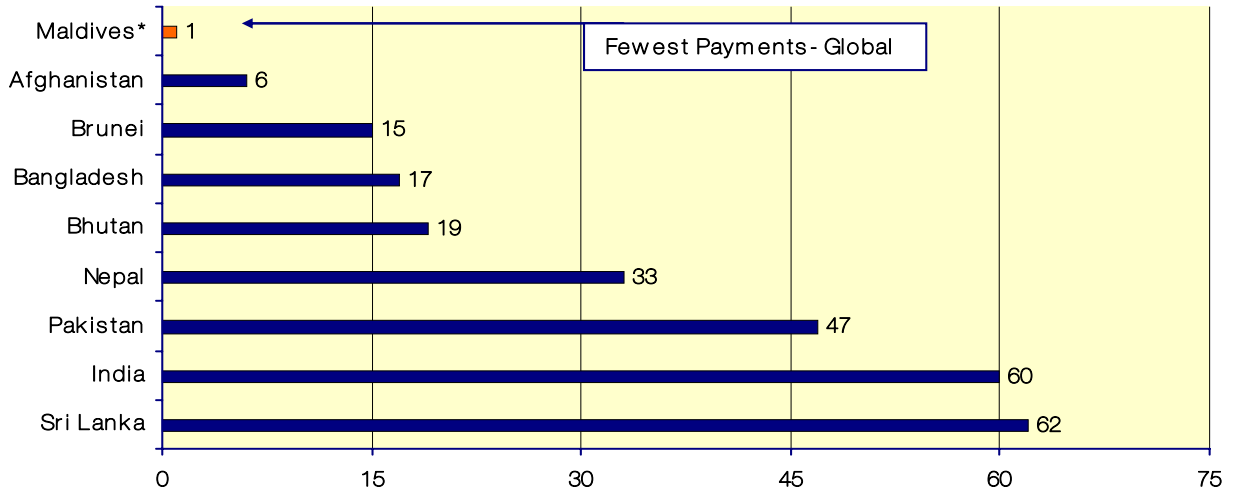

Three indicators are constructed:

- Number of tax payments, which takes into account the method of payment or withholding, the frequency of payment or withholding and the number of agencies involved for the standard case.
- Time, which measures the hours per year necessary to prepare, file and pay the corporate income tax, value added or sales tax and labor taxes.
- Total tax rate, which measures the amount of taxes payable by the company during the second year of operation. This amount, expressed as a percentage of commercial profit, is the sum of all the different taxes payable after accounting for various deductions and exemptions.

Businesses care about what they get for their taxes and contributions, such as the quality of infrastructure and social services. Poor countries tend to use businesses as a collection point for taxes. Rich countries tend to have lower tax rates and less complex tax systems. And rich countries get more from their taxes. Simple, moderate taxes and fast, cheap administration mean less hassle for businesses—and also more revenue collected and better public services. More burdensome tax regimes create an incentive to evade taxes.

Benchmarking—paying taxes
 South Asia—compared with global best practice

Payments (number per year)

* Another economy with the fewest number of payments is Sweden.
